

FLY & DRAIN MANAGEMENT

Cause of Low Regulatory Scoring

Food & Beverage Service Managers need to have an active program that manages the sustained threat that accompanies decaying organic matter found in drains and grease traps. Abra Kadabra has developed comprehensive programs utilizing specially trained teams of technicians who safely and thoroughly manage fly infestations and other essential services.

Fly Infestation Problems

Abra Kadabra has developed a protocol with unique products and services designed to successfully manage fly infestations in commercial facilities, fully compliant with all food safety programs.

- ✓ A single fly carries an average of two million bacteria.
- ✓ Flies contaminate raw food and preparation areas.
- ✓ Fly problems can damage your business and reputation.
- ✓ Flies lower scores for health and safety inspections, leading to closure.

Abra Kadabra provides drain services, reducing the potential breeding grounds for flies and improving drainage from facility-related activities. The process converts organic waste into fatty acids that oxidizes into nonpolluting carbon dioxide and water, safely released into municipal waste systems.

First Service

During the first service we provide a detailed draincleaning service and install insect light traps.

☑ Establish Base Line

We determine a base line “clean” before we initiate a fly management program.

☑ Drain Cleaning

Should conditions require it, we implement a comprehensive drain cleaning program, using microbial cleaning products.

☑ Installation of Devices:

As part of our comprehensive treatment program, we will advise you on whether or not your facility would benefit from the installation of insect light traps or other devices.

Fly Management Solution

Our team of “Green Certified” professionals have devised services that offer comprehensive management and suppression of fly issues in food and beverage preparation facilities. This program effectively deals with fly infestations at all levels.

This solution’s proven effectiveness meets all regulatory standards and third-party audits. Our Fly Management Program begins with a thorough inspection by one of our certified professionals. The result is a plan and frequency regimen leveraging various products, technologies, and services.

Recurring Service Visits

We provide drain service, utilizing microbial products (at a regularly scheduled frequency and duration) to address breeding areas, delivering it into the drains. During subsequent service visits, we also service the mechanical devices (light and insect traps).

☑ Schedule

Regularly scheduled service for the application of microbial products to all drains is part of a comprehensive fly management protocol.

☑ Timing & Monitoring

We monitor and track the results of the service schedule, and make adjustments as needed.

☑ Results

You should expect a cleaner kitchen, higher regulatory scores, a stronger reputation, better morale, and an overall improvement in staff enthusiasm.
