

Mosquito & Tick Prevention FOR CHILDCARE FACILITIES

Safer Outdoor Play Starts Here

Create safer, more comfortable outdoor spaces with mosquito and tick prevention designed for childcare facilities. We help daycare centers, preschools, and summer programs reduce mosquito and tick activity around playgrounds, walking paths, outdoor classrooms, and green spaces.

Built for Childcare Facilities

Outdoor Play Areas

Protecting the spaces children use most, including playgrounds, shaded grass, walking paths, outdoor classrooms, and other high-use areas

Prevention First

Our technicians inspect property, identify mosquito and tick hotspots, and recommend simple ways to reduce conditions that attract mosquitoes/ticks.

Childcare-Focused Service

We work around your schedule, communicate clearly with directors and staff, and provide reliable service for environments where children play.

About the Program

Mosquitoes and ticks can disrupt outdoor play, raise parent concerns, and make playgrounds, walking paths, and green spaces harder to use during peak summer months.

Our technicians inspect your property, identify mosquito and tick hotspots, provide targeted treatments, and share practical prevention tips to help keep outdoor spaces more comfortable throughout the season.

Trusted by MN Childcare Providers

For more than 20 years, we've helped Minnesota businesses protect their facilities with proactive pest management solutions. As a 2026 Minnesota's Best Bronze Winner, we're proud to provide trusted service through environmentally responsible practices and a commitment to long-term prevention.

We help daycare directors and facility managers protect outdoor spaces while supporting the trust families place in their programs every day.
